

Sakum Lang - File-Type Extension Reference

Generated from EXTENSIONS.sakdoc | single source of truth: tools/sakum_ext.py + sakum_lang.sakproj

Extension Registry

ext	category	dispatch	purpose
.sak	source	build	Sakum source code
.sakm	source	build	Sakum module / package source
.sakh	source	build	Header / interface declarations
.sakpkg	package	manifest	Package manifest
.sakproj	package	manifest	Project configuration
.saklock	package	manifest	Dependency lock file
.sakir	ir	build	Intermediate Representation (SIR)
.sakast	ast	build	Abstract Syntax Tree
.sakbc	binary	link	Bytecode
.sakobj	binary	link	Object file
.saklib	binary	link	Static library
.sakdll	binary	link	Dynamic library (Windows)
.sakso	binary	link	Dynamic library (Linux)
.sakdylib	binary	link	Dynamic library (macOS)
.sakexe	binary	link	Platform-independent executable bundle
.sakdoc	doc	view	Language documentation
.sakapi	doc	view	API documentation
.saktest	test	test	Unit tests
.sakbench	test	test	Benchmarks
.sakmath	domain	view	Mathematical formulas / symbolic expressions
.sakphys	domain	view	Physics formulas
.sakchem	domain	view	Chemistry equations
.sakbio	domain	view	Biology / biotechnology models
.sakquant	domain	view	Quantum algorithms and circuits
.sakml	domain	view	Machine learning models / graphs
.saktensor	domain	view	Tensor expressions
.sakproof	domain	view	Formal proofs
.sakgraph	domain	view	Graph / network definitions
.sakquery	script	run	Query language scripts
.sakschema	data	validate	Data schemas
.sakcfg	config	validate	Configuration
.sakcache	cache	ignore	Compiler cache
.sakidx	index	ignore	Search / index database
.sakdb	data	validate	Embedded database
.saklog	log	view	Logs

Reserved Core Set

.sak .sakir .sakast .sakmath .sakquant .sakdoc

Dispatch Semantics

build - compile through the pipeline (source -> AST -> IR -> binary).

link - feed to linker / loader.

manifest - resolve dependencies / validate package.

view - render to human-readable (doc / domain knowledge).

test - run the test / benchmark harness.

run - execute query scripts.

validate - schema / config validation.

ignore - derived data (cache / index); safe to drop.
